

# Knowledge check

3 minutes

1. Microsoft 365 Defender provides automated self-healing to automatically investigate and remediate threats. Which two features enable this?

☐ Automated investigation and remediation, and advanced hunting

☒ Automated investigation and remediation, and Action center

✓ **That's right! Both of these features can be utilized to enable self-healing across your security environment.**

☐ Automated investigation and remediation, and Autoquarantine

2. In the investigation details view, which tab would you use to find the users impacted by the automated investigation?

☐ Pending actions

☐ Alerts

☒ Investigation graph

✓ **That's correct! Provides a visual representation of the investigation. Depicts entities and lists threats found, along with alerts and whether any actions are awaiting approval.**

3. In the Action center, which tab would you use to see a list of all the actions that require attention?

☒ Pending

✓ **Yes, it displays a list of actions that require attention.**

☐ Awaiting

☐ Attention
