# Knowledge check

3 minutes

1. Which three elements can you use to analyze an incident?

☒ Devices, users, and mailboxes

✓ **That's right! An incident includes information on devices, users, and mailboxes that might have been impacted in the attack.**

☐ Devices, users, and attack origin

☐ Devices, users, and resources

2. Why is it important to correctly classify the incident?

☐ To track trends and sort incidents by which ones are more important.

☐ To track trends and close the incident.

☒ To track trends and to improve incident reporting quality.

✓ **That's right! By correctly classifying an incident, Microsoft 365 can learn what are false positives and what are genuine threats and ultimately improve incident reporting quality.**

3. You want to enable email notifications for incidents in Microsoft 365 Defender. What security permission do you need to configure email notification settings?

☐ Manage email settings

☒ Manage security settings

✓ **That's correct! You need 'Manage security settings' permissions to configure email notification settings.**

☐ Manage notification settings
