1. Which Microsoft Defender product, once integrated to Microsoft 365 Defender, provides threat information on email, attachments, and link detections?

☐ Microsoft Defender for Endpoint

☒ Microsoft Defender for Office 365

✓ That is correct. Microsoft Defender for Office 365 integration lets security teams have visibility over malicious emails, harmful attachments, and questionable links

☐ Microsoft Defender for Identity

2. What is one of the key reasons for adopting and using Microsoft 365 Defender?

☒ To automatically analyze threat data across applications, endpoints, identity, and data to build a complete picture of each attack.

✓ That's correct! Microsoft 365 Defender brings together the Microsoft 365 security portfolio to provide a single view of an attack.

☐ To improve your organization's security perimeter and stop cyber-attacks by minimizing your organization's attack surface.

☐ To automatically lock down any malicious or suspicious behavior by users within your organization and to notify your security team.
