Choose the best response for each of the questions below. Then select Check your answers.

Check your knowledge

1. An organization is using Azure and wants to improve their security best practices. Which Azure specific benchmark would the IT security team need to consider?

- Azure Security Benchmark.

✓ That's correct. The Azure Security Benchmark provides prescriptive best practices and recommendations to help improve the security of workloads, data, and services on Azure.

- Center for Internet Security.
- Microsoft cybersecurity group.

2. An organization is using Microsoft Defender for Cloud to assess its resources and subscriptions for security issues. The organization's overall secure score is low and needs to improve. How could a security admin try to improve the score?

- Close old security recommendations.
- Remediate security recommendations.

✓ That's correct. To improve a secure score, remediate security recommendations from the recommendations list.

- Delete security recommendations.

3. An organization needs to continuously monitor the security status of its network. What Microsoft Defender for Cloud tool would they use?

- Continuous assessment.

- Network map.

✓ That's correct. The network map provides a map of the topology of your network workloads, which lets you block unwanted connections.

- Network assessment.
